
Iyosis Piwik is a component to display your Piwik statistics on your Joomla admin panel.

You need a running Piwik installation and at least view access to your stats (I believe to have a standalone Piwik installation is much better as integrate it in Joomla). Also PHP 5 or higher is required.

Authentication methods

Token Authentication: Copy the 'token_auth' from the Manage Users page, and paste it in the field below.
Automatic Login: This will log the user (create a cookie in your browser) and redirect to the index.php on succesful login. Enter your username and MD5 password in the fields below.
Public View: Set the 'view' permissions to the anonymous user in the Users Management section of Piwik.

Piwik is a downloadable, open source (GPL licensed) real time web analytics software program. It provides you with detailed reports on your website visitors: the search engines and keywords they used, the language they speak, your popular pages… and so much more.

Piwik is an open source alternative to Google Analytics.

Look at the Piwik website to get further information about Open Source Web Analytics Software Piwik.

Designed with Model-View-Controller (MVC) design pattern.

Graphs powered by jqPlot , an open source project by Chris Leonello.

License

The extension is under GPL license .

Support

If you need support or want to discuss the extension, please use the forum .
